RM7

RM7 is a controlled temperature electrical resistance heater for the heating of intravenously injectable medicines. RM7 is designed to reach and maintain a temperature of 36°C (+/-1.5°C). However, the digital thermostat allows you to set a different temperature in a range from 32°C to 40°C. As with FM7, if the set temperature is affected by a variation of more than +/-1.5°C, two alarms will be set off: an acoustic alarm (buzzer) and a visual alarm (red flashing LED) with function similar to that for FM7.

Technical data

Height	404 mm
Width	278 mm
Depth	241 mm + 20 mm (hinge)
Product Class	from 0 to 20 litres
Type of installation	Built-in refrigerators
Gross Volume	7 L

Print date: 26/04/2018

Features and specifications are subject to change without notice.
